

Dog rose

Scientific classification

Dominion:Eukaryota

Kingdom:Plantae

Division:Magnoliophyta

Class:Magnoliopsida

Order:Rosales

Family:Rosaceae

Genus:*Rosa*

Species:*R. canina*

Tree: This is robust and spiny trunk which is high about 100-200 cm. It has tenterhooks which are arched and compress base and red. The cortex flakes frequently.

Leafs and flowers

Branches have about 5-7 little oval leaves with toothed sides.

Flowers have big petals and they are quite fragrant . They bloom in May or June.

Fruits

Fruits (cinirroidi) are fleshy and coloured in a vivid way; in winter they are ripes. The fruit is used for his contents of vitamine C.
